

Tim Kaltenecker, Administrator, Byram Hills Central School District

The CC standards in math/ELA are acceptable except:

- High school math. Too broad. Need to go more in depth and cover less, especially in Algebra 1 and Algebra 2/Trig
- Math standards too conceptual too early. Algebra should start later.

Implementation process for CC was too fast. It takes 3-5 years to implement something well, so should not expect students to achieve high standards in 1 year.

- Implementation cannot be K-8 in 1 year! Needs to be rolled out over time as students progress through standards

State tests should measure student progress and provide districts with information to improve.

Data - the state should have enormous data based on state tests. Focus resources on making data available in easy and understandable ways to teachers and administrators so we can use information to improve curriculum and instruction.
