

Jennifer, Parent

"I am not only a parent but a teacher as well. I think it is unheard of to have children learn common core. When we were children we learned long division in simple steps and it worked. We all learned it without breaking numbers apart to put them back together again. Why are we teaching kids to do things in 10-15 steps instead of 2-3 steps? We are setting kids up for common mistakes. As a special education teacher we try to find short cuts and teaching the simplest methods to make kids understand. Why fix something that wasn't broken? I am firmly against all of this!!!"
