

**Nicole Mullin, Parent**

"My children are in 2nd, 4th, 6th and 8th grade. I have no issuea with the curriculum. The way the math is explained is how i have always done it in my head so i can help my children when necessary. They are all flourishing. I am so sick anti-common core parenta complaining about it when they could take a few minutes and learn it themselves to make it easier on the kids. They want it easier for them, not the children. Just my opinon and i would probably be lynched for it in my district."
