

Adam Rizzuti, Teacher

"I teach art but my wife teaches math. I hear a lot about how math is being taught at the middle and high school levels. To me, if it wasn't broke, why fix it? It seems like the way math is taught using the common core standards is backwards. Aligning children to a test is wrong. Making math more confusing for some kids is wrong. The common core curriculum in general is stifling and is creating a one-dimensional child. We should be encouraging kids to think outside the box and be more creative. It's gotta go."
