

Scott Ryan, Parent

"From looking at my children's school work, the Common Core curriculum is missing a lot. It doesn't allow for out of the box thinking. The math skills needed to solve the problems are convoluted, confusing and not direct. I am a Science teacher, so many of the Common Core curriculum isn't see in my classroom.

Changes are needed, but the Common Core, its testing practices and ramifications for the students and teacher are deeply flawed. They should be removed, refined and re-implemented when it works for everyone."
