

Cheryl Sedutto, Parent

"Very disappointed in the way math is being taught. My high school freshman is lost thanks to common core and also having a terrible teacher. How can you change the way they are taught halfway through school? Shouldn't it off stated in kindergarten? While my third grader is doing fine with it I can't help her with any homework because I can't understand it. Half of this crap she will never use. I agree you can arrive at the same answer different ways but why not give them the multiplication table to memorize. Why is it broken down 10 different ways? $6 \times 8 = 48$ it's simple direct and to the point. Basically wasting time forcing these state tests and teaching nothing else but how to pass the test. Well rounded is more important to me than passing a test designed by idiots. Test my kid weekly and see how they do dint judge on 1 test 1 day."
