

Abby Woodworth, Parent, Byram Hills PTSA

My son is in 4th grade. He is a gifted math student and answered every question correctly on the 3rd grade math state test. The following problem frustrated him and made me realize that we are no longer teaching math in math class.

~~OBJ:OBJ:OBJ:~~COMMON CORE MATHEMATICS CURRICULUM Lesson 4 Problem Set 4 2

~~OBJ:OBJ:~~4. Use words, equations, or pictures to show and explain how metric units are like and unlike place value units.

The answer per engage ny is is 'They are not alike because i can not rename any measurements as equal to 10. '

As a grown woman, I am still not sure what this is explaining and how my son would understand math better because of this question. Can we please put some math back into the bath modules.
